# 02 Executive summary

### 2.1 Commentary on the fund

Dear investor,

Q1 2025 marked another important chapter for Below One Fund I, not only in terms of new investments but also as we approach the formal end of the investment period and prepare for the launch of Below One Fund II. While the broader macroeconomic picture remains turbulent, the current environment continues to sharpen the distinction between companies that are lean, resilient, and genuinely value-creating—and those that are not. In this context, our portfolio strategy and disciplined selection have never been more critical.

In Q1, we added two new companies to the portfolio—**Project Eaden** and **Mondra**—each representing a strong thematic and scientific fit with our investment approach. We also deepened our commitment to existing portfolio companies, with a follow-on investment in **Ecair** to support its accelerating fintech strategy for sustainable home renovation. Details on all three transactions can be found in the *New Investments* section below.

Looking ahead, we have completed two additional initial investments in Q2 2025. With that, the **Below One Fund I** portfolio will comprise 29 companies, reaching a well-diversified footprint across sectors, stages, and geographies. Importantly, we continue to reserve sufficient capital for follow-on funding, which we see as an essential lever both for fund performance and supporting the most promising teams in the currently challenging environment.

In parallel, preparations for **Below One Fund II** are now well underway. We expect to announce the first closing in the coming weeks, marking both the next chapter for Planet A and the formal conclusion of the investment phase for Fund I. With the foundations laid and momentum building, we are excited to carry forward the learnings, networks, and track record of Fund I into this next generation.

As always, thank you for your continued trust and support.

Kindly inform us of any updates or changes to your contact information, shareholder relations, bank account, signatories, or headquarters.

Warm regards,

The Planet A Team

### Platform

The Planet A Impact Report 2024, which we shared in Q1, is now <u>publicly available online</u>. In the report, we share our perspective on political and tech developments, report on the impact of our portfolio, and introduce new teams and technologies, unlocking massive, measurable systemic change.

### New Investments

### Project Eaden (initial investment)

### The Problem

Global meat demand is surging, but conventional production comes with a steep environmental cost—high emissions, heavy land and water use, and dependence on antibiotics. While plant-based alternatives are more sustainable and gaining traction, they often lack the taste and nutritional profile to win over consumers.

#### The Solution

Project Eaden is redefining plant-based meat with its proprietary fiber-spinning technology. Borrowing techniques from the textile industry, they create plant-based fibers that mimic the texture of real meat—right down to collagen and muscle fibers. The result? A product that's as close to meat as it gets, without the environmental impact.

### Why we invested

The plant-based meat market is growing fast. As awareness of health, sustainability, and animal welfare accelerates, the demand for superior plant-based options is only increasing. In Germany alone, the ham market is worth \$2 billion. Project Eaden is uniquely positioned to capture this momentum.

What truly sets Project Eaden apart is the eating experience. Their ultra-realistic textures replicate the complex chew of real meat, convincing even the most skeptical meat lovers. This is a plant-based product that doesn't feel like a compromise—it's indulgent, satisfying, and poised to convert a new wave of consumers.

#### Impact

The current livestock industry results in high GHG emissions, a high demand for land and water, and pollution of water bodies and a substantial negative impact on biodiversity. Agriculture accounts for 24 to 37% of total anthropogenic GHG emissions if all impacts of meat production are included. Up to 57% of these emissions can be attributed to livestock.

Project Eaden products address several market barriers of meat substitutes, such as the texture and mouthfeel, thus accelerating the wider adoption of alternative protein sources. Compared to animal meat, Project Eaden's alternative offers significant benefits per kilogram: It reduces greenhouse gas emissions by up to 20 kg CO<sub>2</sub>-eq, equivalent to driving about 100 kilometers in an average fossil fuel car; cuts water use by 43 to 56 m³, equivalent to daily water use of up to 659 European citizens\*; decreases land use by 9 to 18 m², roughly the size of two parking spaces.

### Mondra (initial investment)

#### Problem

The food industry is responsible for nearly 30% of greenhouse gas emissions when imports are included, yet the majority of these—so-called Scope 3 emissions—remain largely invisible due to fragmented, non-standardised supply chains and poor data interoperability. Retailers and brand owners face growing regulatory and commercial pressure to decarbonise, but often lack the tools to measure environmental performance at the product level, let alone take meaningful action. Most solutions today rely on averages, proxies, or one-off consultancy projects—offering limited scalability or operational relevance.

#### Solution

Mondra offers a cloud-based enterprise software platform that provides highly granular, SKU-level insights into the environmental footprint of food and FMCG products. Through automated lifecycle assessments, digital supply chain twins, and an Al-powered scenario modelling engine, Mondra enables retailers and their suppliers to map, measure, and mitigate product-level emissions with unmatched depth and speed. Already deeply embedded in the UK food retail sector, the platform is now expanding its scope through strategic partnerships with Oracle and Kynetec to deliver primary agricultural data, global reach, and further monetisation opportunities.

### Why We Invested

We backed Mondra because it is the most advanced solution in a critical and fast-growing category. The company has rapidly secured all major UK grocers as customers, positioning itself as the de facto standard for environmental product pasporting in the food sector. Its technical moat—rooted in proprietary modelling capabilities and exclusive data integrations—gives it a defensible edge in a crowded market. Mondra's go-to-market strategy, anchored in coalition-building and embedded systems integrations, reflects a maturity rare at this stage. Most importantly, the founding team combines deep domain expertise with a demonstrated ability to execute at pace, and a clear vision for international expansion.

#### Impact

Mondra plays a pivotal role in enabling the food industry's transition to net zero. By delivering actionable, product-specific environmental intelligence, it allows retailers and suppliers to make informed decisions across product reformulation, sourcing, and supplier engagement. Early customers like Tesco and Nando's have already used Mondra's insights to drive double-digit carbon reductions in high-volume SKUs. As regulatory requirements tighten and food systems come under increasing scrutiny, we believe Mondra will be a central enabler of measurable, system-wide decarbonisation across one of the world's most impactful industries.

### Ecair (follow on investment)

We recently participated in the latest accelerator round, joining existing investors Ubermorgen, Silence VC, and Climate Club, alongside new investors Voyagers and Inco Ventures. The total round size was EUR 1,9 million.

The company has strategically pivoted and is doubling down on its emerging fintech business model, which is showing strong early traction. Their working capital product for installers of eco-friendly home renovations is really picking up speed, with strong growth in new installers, projects onboarded, and monthly revenues—bringing total earnings for the year to date to a solid milestone.

Demand continues to be robust, with a strong sales pipeline and frequent customer inquiries for their upcoming consumer financing product aimed at eco-friendly home renovations. The launch is planned in the coming weeks, in partnership with Credit Agricole.

### Market Overview

### Macroeconomic trends and effects on green tech

Key economic indicators suggest growing instability. Rapid policy shifts—such as new tariffs and reductions in science, infrastructure, and clean energy funding—under the current US administration have introduced ongoing uncertainty into worldwide markets.

In April the U.S. kicked off the latest wave of tariffs with a "reciprocal tariff" policy. These measures wiped out USD 6,6 trillion in market cap in just two days (WSJ), markets dropped 5-8%, JPMorgan bumped recession odds to 60%, Goldman Sachs sees it at 35%.

We may be entering a macro environment marked by both rising prices and softening demand—a potentially destabilising mix of inflationary pressure and recessionary risk. If this trend continues, we could see a broad pullback in spending.

In such a scenario, we might witness a growing divide between winners and losers. High-burn startups with long sales cycles and no clear path to profitability could struggle to survive. Tough headcount decisions may lie ahead, and austerity could return as a dominant mode. Conversely, lean, capital-efficient businesses might stand out—especially those with real cash flows, pricing power, or Al-driven solutions to pressing problems. We may also see a rise in bootstrapped ventures led by laid-off talent.

In the U.S., proposed tariffs could have a chilling effect on green tech by severing access to critical supply chains. If this materialises, it would create an opening for European founders to lead in climate and energy innovation.

At the same time, M&A activity may accelerate, as cash-rich incumbents look to acquire rather than invest in the next funding round.

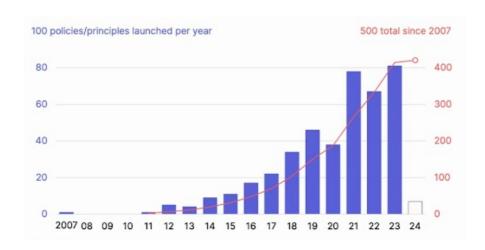

We engage with our founders to navigate these uncertain times, with our recommendations focusing on three main issues:

- 1. Preserving Cash and Extend Runway,
- 2. Reassessing Supply Chains,
- 3. Preparing for Customer Slowdowns.

With policy shifting daily, none of the gloomier scenarios may come to bear. But we encourage our portfolio founders to think about being leaner and more resilient during this period of uncertainty. For well-positioned startups, this period might present not just challenges, but exceptional opportunities.

At the same time, there remain numerous reasons to maintain a positive outlook on the greentech sector. As illustrated in the news updates below, Europe, in particular, continues to demonstrate robust policy commitments that are driving substantial momentum in sustainability initiatives and green technologies. Additionally, in the United States, recent litigation victories have reinforced sustainability provisions, enhancing confidence in supportive regulatory frameworks. Corporate commitment remains strong across various industries, further underpinning optimism for continued growth and investment in green tech innovations globally.

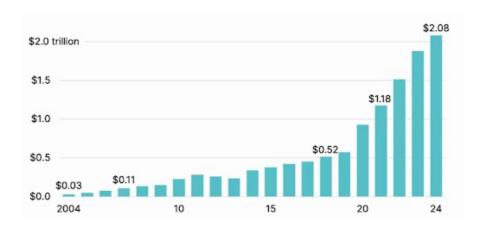

### Climate Mitigation Policies and Principles Launched

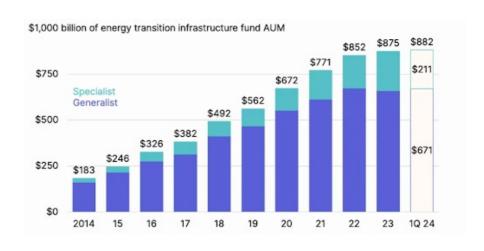

In 2024, annual investment in the energy transition surpassed USD 2 trillion—a remarkable milestone that underscores the accelerating pace of the global shift towards cleaner energy systems. At the same time, assets under management (AUM) in energy transition-focused funds are approaching the USD 1 trillion mark. This capital is split between specialist funds dedicated solely to the energy transition and generalist funds with a strong energy transition focus, reflecting both deepening expertise and growing mainstream investor interest in the sector.

Annual Energy Transition Investment, Global

Source: Bloomberg NEF, visual: Nat Bullard

Energy Transition Infrastructure Fund AUM

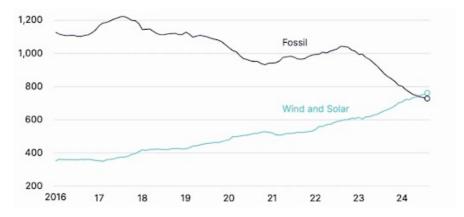

Source: Pitchbook, visual: Nat Bullard

Moreover, full data for 2024 indicates a record-breaking year for renewable energy and electrification, reinforcing the economic viability and stability of this accelerating transition. According to IRENA's latest data, global renewable energy capacity grew by a record 585 gigawatts in 2024, marking a 15,1 percent year-on-year increase. Renewables now constitute 93% of newly installed power capacity worldwide, reflecting the combined effects of declining technology costs and stronger alignment among policy, financial, and climate goals. In Europe, it was the first year that more power came from wind and solar than fossil.

Terawatt-hours trailing 12 months power generation in the EU

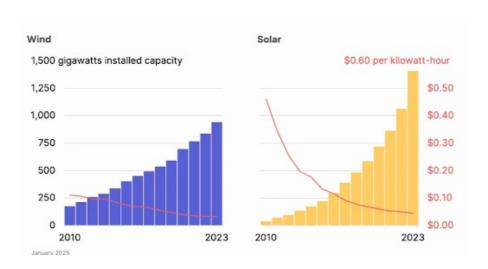

Source: Ember, visual: Nat Bullard

Wind and solar energy have both experienced a significant decline in costs per kilowatt-hour, driven by the rapid increase in gigawatt-scale deployment. These technologies have reached a point where they are increasingly viable without policy support. Furthermore, energy prices in Europe could decline even further in the coming years if tariffs lead manufacturers to redirect capacity from the U.S. to the EU market.

The levelised cost of wind and solar compared to gigawatts installed capacity

### European-Wide Policy News Q1 2025

### Clean Industrial Deal (CID):

- The European Commission published the CID alongside the Affordable Energy Action Plan to boost competitiveness through decarbonisation.
- ° CID prioritises energy-intensive industries and clean-tech as a transformation and competitiveness enabler.
- The Steel and Metals Action Plan as part of CID, includes tighter trade defence measures, clarity on Carbon Border Adjustment Mechanism (CBAM), and support for low-carbon steel production.

### EU Industrial Decarbonisation Bank:

 A new EUR 100 billion Industrial Decarbonisation Bank was launched to finance decarbonisation projects, aiming to cut industrial emissions by 30% and attract EUR 400 billion in private investments.

### Innovation Fund & Competitiveness Fund:

Additional funding announced for the Innovation Fund (tens of billions EUR), focusing on easier access for SMEs and scale-ups.

### InvestEU Expansion:

· The InvestEU program will expand guarantees and mobilise up to EUR 50 billion in additional public and private investments for

industrial modernisation, climate tech manufacturing, energy infrastructure, clean mobility, and recycling initiatives starting in 2025.

#### Critical Raw Materials Initiative:

- The European Commission selected 47 strategic projects across 13 EU countries to enhance Europe's critical raw material supply chain, covering mining, processing, and recycling.
- Energy Storage and Mobility Investments:
  - EUR 1,25 billion allocated under Connecting Europe Facility for hydrogen, carbon capture, and grid infrastructure.

### **European National Policy News Q1 2025**

- German Climate and Transformation Fund:
  - Germany announced a EUR 100 billion injection into its Climate and Transformation Fund as part of a broader EUR 500 billion infrastructure investment aimed at achieving climate neutrality by 2045.
- Nuclear Energy in Europe:
  - UK relaxes nuclear site regulations to accelerate deployment of Small Modular Reactors (SMRs).
  - Belgium repealed its nuclear phaseout law, extending reactor lifespans and planning new reactors targeting a 4GW nuclear capacity to support clean energy goals.

### Global Policy News Q1 2025

#### **United States:**

- Nuclear Energy Expansion: The Trump administration is accelerating the deployment of nuclear energy. Regulatory reforms are
  underway to expedite licensing processes for new nuclear plants, including small modular reactors (SMRs), aiming for rapid integration
  into the national grid.
- Climate Grant Program Restored: A federal judge reinstated the Biden-era USD 20 billion climate grant program, overturning
  attempts by the Trump administration to block funding for clean energy initiatives.
- Supreme Court Supports State Clean Energy Policies: The Supreme Court upheld the rights of states to implement independent clean energy policies, marking a significant victory for states pursuing ambitious climate targets amidst broader federal rollbacks.

#### Elsewhere:

- China Widens Carbon Market: China announced plans to extend its national carbon market to include steel, aluminum, and cement sectors in 2025. This expansion incorporates approximately 1.500 companies, covering around 60% of China's total emissions, marking a significant step for the world's largest emitter, responsible for approximately 30% of global emissions.
- China Economy-Wide Emission Reduction Goals: In a significant move ahead of the COP30 summit, China announced plans to establish new climate targets covering the entire economy and all greenhouse gases by 2035.
- **UAE's US Investment Commitment:** UAE committed to a 10-year, USD 1,4 trillion investment in the US, significantly expanding its footprint in sectors such as Al infrastructure, semiconductors, clean energy, manufacturing, and notably, establishing the first new US aluminum smelter in 35 years, nearly doubling domestic aluminum production.
- Australia Expands Nature Protection: Australia committed AUD 250 million (USD 157 million) to safeguard an additional 30 million hectares (115.830 square miles) of bushland—an area larger than New Zealand—significantly strengthening its emerging nature restoration market.

### Corporate Sustainability Highlights Q1 2025

### Corporate Investments

- · Japan's GPIF (Japan's USD 1,7 trillion pension) reaffirmed strong ESG commitments despite global backtracking.
- InnoEnergy launched a EUR 160 billion clean-tech mobilisation plan to scale domestic innovation.
- BBVA set a EUR 700 billion sustainable finance target for climate, natural capital, and inclusivity initiatives.
- Hyundai invested USD 21 billion in US EV, hydrogen, and battery tech amid tariff threats.
- Blackstone raised USD 5,6 billion for energy transition, focusing on renewables and infrastructure.
- Amazon invested USD 1 billion in electrifying its European logistics with Mercedes-Benz eActros trucks.
- Stockholm Exergi secured USD 1,8 billion for the BECCS facility, removing 800.000 tons CO<sub>2</sub> annually.

### Corporate Initiatives

• Open Power Al Consortium: largest players - Nvidia, Microsoft, PG&E, and Constellation have created a consortium for managing Al-

- driven grid strain, forecast to 4% annual energy demand.
- Amazon, Google, Meta supported tripling nuclear power capacity by 2050.
- Boeing invested in Norsk e-Fuel for sustainable aviation fuel, cutting emissions by 90%.
- United Airlines increased SAF and carbon removal investments, securing 500.000 tons of CO<sub>2</sub> removal.
- Rio Tinto secured 2,7GW renewable PPAs, cutting aluminum operation emissions by 70%.
- Infineon Technologies partnered with CDIL Semiconductors for EV and renewable energy chip production in India.
- Nordea purchased substantial carbon removal credits via North Sea carbon capture.
- · Microsoft expanded forest restoration in Brazil for carbon removal, aligning with its 2030 carbon-negative goal.
- AstraZeneca and Future Biogas launched UK's first unsubsidized biomethane plant.
- Kellogg's initiated hydrogen-powered cereal production in the UK.
- Lululemon expanded bio-based nylon partnership, targeting 100% sustainable nylon by 2030.
- **LEGO Group** increased solar capacity by 72% globally.
- BYD Energy Storage and Saudi Electricity Company signed the world's largest battery storage project (12,5GWh).

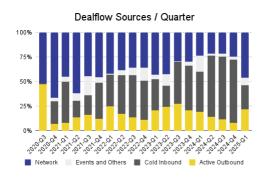

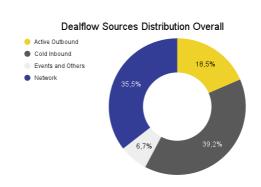

### Deal flow Q1 2025

The following charts illustrate the background of our deal flow in terms of geography, industry sectors, sources, type and stages during the respective quarters since Q3 2020.

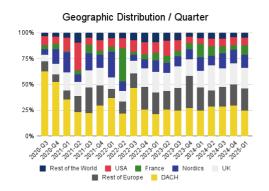

We were once again able to enjoy a quarter with high-quality deal flow. While we continue to expand and professionalise the technical support for the holistic analysis process, we are also sharpening our focus and concentrating on the deals and sources that we believe have the greatest prospects of success. In this way, we are continuing to work on realising our claim of having seen all successfully developing deals from our targeted industry sectors at least once.

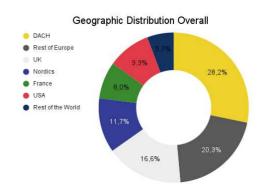

In the first quarter of 2025, we observed a notable shift in the composition of our deal flow sources compared to previous quarters. The most significant development was the marked increase in deals sourced through our network, which accounted for 46% of all new leads - nearly double the contribution seen in Q4 2024. This surge underlines the continued strengthening and activation of our network, and the growing relevance of our existing connections in the ecosystem. Meanwhile, cold inbounds remained a strong contributor, representing 24% of the total deal flow. This consistency signals sustained visibility and interest from founders reaching out independently to Planet A, likely a lingering effect of our continued public presence and reputation. By adapting our cold inbound channels, however, this proportion has been actively managed and reduced overall. Active outbound efforts, driven by our thesis-based sourcing strategies, contributed nearly 22% of the deal flow this quarter. This marks a strong rebound from the lower figures in Q4 2024, when travel and event schedules limited outbound capacity. The increase reflects a more deliberate and focused outreach approach, now that team capacity has normalized. Events and other channels contributed a relatively modest 8% to the deal flow in Q1, although this is still a strong figure compared to other quarters, which should also be understood as a follow-up to the event season in Q4 2024. Apart from that this aligns with the seasonal slowdown in major industry events early in the year, and is consistent with expectations for the first quarter.

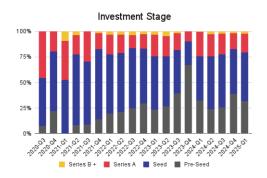

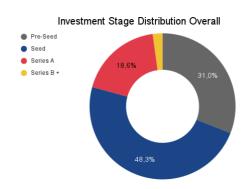

The geographical distribution of Planet A's deal flow in the first quarter of 2025 remained broadly consistent with previous trends, while also reflecting some noteworthy regional shifts. The DACH region (Germany, Austria, and Switzerland) contributed 25% of the overall deal flow this quarter, slightly down from its Q4 2024 share. While still a substantial portion, this decrease suggests a moderate balancing out after a stronger-than-usual showing in the final quarter of last year. The UK maintained its position as a key market, accounting for 20% of all deals just marginally below the previous quarter. This consistency highlights the UK's continued relevance and strong startup ecosystem within our sourcing landscape. Interestingly, France experienced a significant increase in its contribution, rising to 9.5% of total deal flow. This suggests growing visibility and engagement within the French ecosystem and may indicate an area of increasing strategic importance. The Nordics registered a slight dip to 12,5%, while the Rest of Europe - excluding the aforementioned regions - accounted for 21%, reflecting a modest rise. Together, these figures signal stable and robust deal activity across the broader European region, now collectively comprising 63% of the total deal flow. Deals originating from the USA and the rest of the world remained steady at 12%, unchanged from the previous quarter. This suggests a continued baseline level of international visibility outside Europe, though the core focus remains within the continent. Overall, Q1 2025 underscores the enduring strength of our European sourcing footprint, with encouraging signs of diversification - particularly in the French market - complementing our solid presence in the DACH region, the UK, and the Nordics.

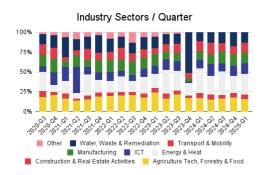

In Q1 2025, the distribution of deal stages saw a moderate recalibration compared to the previous quarter, with a continued emphasis on early-stage opportunities. Seed-stage deals represented the largest share of the pipeline, accounting for 48% of all new opportunities. This marks a notable increase from Q4 2024, reaffirming Planet A's strong positioning within the early-stage ecosystem. The growing presence of seed-stage companies in our deal flow indicates both market activity at this level and continued alignment with our investment focus. Presed deals, while still substantial, saw a relative decrease to 32%, down from over 39% in the previous quarter. This shift likely reflects a normalisation following the strong surge observed at the end of 2024. Nevertheless, pre-seed continues to represent a key entry point for our engagement with emerging ventures. Series A opportunities rose slightly to 18%, building on the previous quarter's 16%. This incremental increase suggests an improving balance in our pipeline, with slightly more mature companies also reaching out or being sourced actively. As in past quarters, later-stage deals (Series B and beyond) remained limited, contributing just 2% to the overall deal flow. This is consistent with Planet A's primary focus on early-stage investments and is in line with the firm's strategic priorities.

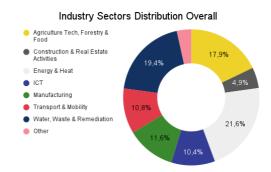

Planet A's deal flow continued to reflect a strong alignment with the core sectors of the EU Taxonomy in the first quarter of 2025, with nearly all deals again focused on industries addressing high-impact environmental challenges such as greenhouse gas emissions and pollution. Energy & Heat re-emerged as the most prominent sector in our pipeline, increasing its share significantly to just above 26% of all deals. This marks a rebound from the dip observed in Q4 2024, reaffirming the sector's central importance in the transition to sustainable systems and its resonance with both founders and our investment thesis. Agriculture Tech, Forestry & Food maintained its strong momentum, contributing nearly 16% of total deal flow. This sector remains a key area of innovation, driven by urgent needs in food systems, land use, and sustainable agriculture practices. Manufacturing also demonstrated a solid presence, with more than 13% of deal flow - indicating a continued interest in climate-tech solutions aimed at decarbonising industrial processes. The ICT sector accounted for nearly 14%, underscoring the growing role of digital technologies in enabling emissions reductions, circularity, and more efficient resource use across verticals. Water, Waste & Remediation saw a decline from its Q4 peak but still maintained a respectable share at a bit over 13%, reflecting sustained activity in circular economy solutions, waste valorisation, and water innovation. Transport & Mobility registered a steady share of slightly over 12%, highlighting ongoing interest in transforming mobility systems - particularly around electrification, logistics optimisation, and low-carbon alternatives. Finally, Construction & Real Estate Activities held a smaller but consistent share of deal flow at more than 5%, as this traditionally carbon-intensive sector slowly sees more innovation focused on sustainability and energy efficiency.

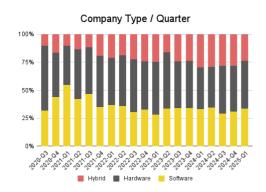

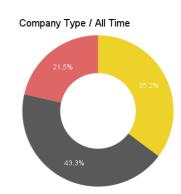

The composition of Planet A's deal flow by company type remained broadly in line with recent quarters, while showing some subtle shifts in the balance between software, hardware, and hybrid business models. Hardware-focused startups maintained the largest share of the deal flow, contributing more than 42% of all new opportunities. This slight increase from the previous quarter underscores Planet A's continued engagement with ventures tackling physical-world challenges through technological innovation - especially relevant in areas like energy, manufacturing, and mobility. Software-only companies accounted for just under 34% of the total deal flow, continuing a gradual upward trend. This rise reflects the growing role of digital platforms and SaaS models in driving climate solutions, particularly within sectors such as ICT, circular economy, and resource optimisation. Hybrid companies - those integrating both hardware and software components - made up 24% of the Q1 deal flow, showing a small decrease from Q4 2024. While slightly lower in share, this segment remains critical, especially in areas where system integration and smart infrastructure are essential to unlocking impact.

SoftwareHardwareHybrid

# 5.1 WILDPLASTIC

### Key information

WILDPLASTIC recovers plastic from nature and produces recycled new products such as the WILDBAG — the first trash bag that cleans up the world. The team around CEO Christian Sigmund assumes that plastic waste is not waste. It is a valuable resource. They source their plastic from beaches, streets, backyards, landfills, and illegal dumpsites and work with communities of collectors around the world to bring these materials back into the production cycle. All products are made of WILDPLASTIC and are 100% recyclable.

# 5.2 Dance Mobility

### Key information

Dance was founded to make sustainable transportation simple by providing a full-service approach to electric mobility. By offering an e-bike subscription priced as low as €59 per month, Dance is not only lowering the barrier to adoption, but also simplifying ownership with multiple benefits: free home delivery, flexible subscription terms, speedy repairs and theft protection. Dance's offering positively impacts health, sustainability, and livable cities by catalyzing a movement of riders.

# 5.3 traceless materials

### Key information

traceless materials developed a sustainable alternative to single-use plastics. The innovative, patent-pending technology and a circular economy approach enable traceless materials to transform agricultural industry residues into novel materials like alternatives for plastic films, hard plastics, and coatings. All products made of traceless materials degrade under natural composting conditions and are free of hazardous additives or solvents while providing the beneficial properties of conventional plastics.

# 5.4 Makersite

### Key information

Makersite is a data and software company that develops next-generation product data management tools for the global manufacturing industry. Makersite's Enterprise Digital Twins are a game-changer for manufacturing companies undergoing rapid transformation. They ingest and automatically map millions of customer-datapoints to deliver decision support across 50+ criteria, including carbon, cost, regulatory compliance, safety, deep-tier risk, and others. Brands like Microsoft, P&G, and Cummins rely on them to quantify their Scope 3 emissions and accelerate product development towards net-zero. The company is rapidly developing its Al and knowledge graph-powered platform, establishing ground-breaking partnerships with data vendors to build the world's largest connected product information database to power its platform.

## 5.5 Ineratec

### Key information

INERATEC, a spin-off company from Karlsruhe Institute of Technology (KIT), develops, builds, and delivers chemical plants equipped with innovative chemical reactor technology for Gas-to-Liquid, Power-to-Liquid, and Power-to-Gas applications. INERATEC's technology and know-how are based on compact and microstructured chemical reactors for decentralized and demanding applications, such as Fischer-Tropsch synthesis, methanol synthesis, methanol synthesis gas generation via catalytic partial oxidation and reverse water gas shift. Synthetic fuels are a solution to multiple hard-to-abate transportation modes like aviation and shipping. Ineratec is thus an enabling technology contributing to climate mitigation.

| Investment name                   | Ineratec                                       |

| Gross IRR                    | 11.50%    |

# 5.6 C1 Green Chemicals

### Key information

C1 commercializes a proprietary homogeneous methanol catalysis, disrupting the 100-year-old methanol production process still in use today. The C1 technology cuts the pressure and temperature needed in half, produces substantially less unwanted byproducts and is far more selective. It can be operated more flexibly and scales better.

The goal of C1 is to lower the green premium of non-fossil ("green") methanol and thus help reduce the world's dependency on oil, gas and coal. Green methanol will play a pivotal role to defossilize two hard-to-abate industries: container shipping (as a carbon-neutral fuel) and chemical production (as a non-fossil carbon source for chemical products).

| Gross IRR                    | 32.02%     |

# 5.7 GA Drilling

### Key information

GA Drilling has developed a novel plasma drill, a new type of contactless drill that destroys hard rock using high-powered plasma pulses. Compared to legacy mechanical drilling, this contactless technology is key, as it overcomes the "tripping" challenge.

Their innovative technology is able to tap into ultra-deep geothermal energy and could give human society access to a permanent supply of renewable heating, cooling and power, provided anywhere, as well as providing a future-proof transition for skilled oil and gas workers, as existing infrastructure can be easily used. Their plasma driller leads to reducing drilling costs for geothermal projects, allowing the energy price to remain competitive even at deep depth.

| Investment name                   | GA Drilling                                       |

# 5.8 goodcarbon

### Key information

goodcarbon offers an investment and trading platform that will accelerate the investment into nature-based climate solutions. By building a three-sided, tokenized platform connecting carbon entrepreneurs (supply) to impact investors (finance) and

to businesses (demand) they solve the financing challenge in the voluntary carbon market. The platform aims to unlock the full potential of nature by accelerating funding

for nature-based projects, elevating the quality of supply, and providing efficiency and transparency.

# 5.9 one.five

### Key information

one-five redefines single-use plastics for packaging by developing and commercializing innovative solutions based on paper and novel bioplastics. The company does not just target one specific solution but is building a platform for different sustainable packaging solutions. They provide customised, cleaner, and circular packaging solutions in record time; designed to drop into existing consumer packaging value chains to create a measurable, positive impact on the environment.

# 5.10 The Landbanking Group

### Key information

The Landbanking Group is building an integrated system to change land management globally. They are developing one platform for "land stewards", such as farmers and foresters, to do a series of steps:

- 1) enter ecosystem services stock,
- 2) have their land verified (both on-ground and remote verification) and
- 3) sell credits, ecosystem services, sustainable biomass/crops and natural capital assets via Landbanking's registry. The platform will provide land stewards with the data, tools and incentives they need to turn their land into productive and thriving ecosystems.

# 5.12 Carbon Re

### Key information

Carbon Re is on a mission to reduce carbon emissions by gigatonnes every year through the use of Al technology. Its focus is on energy-intensive industries such as cement, steel and glass, which are responsible for more than 20% of global emissions. Carbon Re's Delta Zero platform for industrial decarbonisation uses deep learning to enable rapid development and deployment of new low-carbon industrial processes, designs and materials.

# 5.13 44.01

### Key information

44.01 leverages the process of carbon mineralization to eliminate CO2 from the atmosphere and turn it into rock. Natural peridotite mineralisation can take many decades, but 44.01's technology accelerates the process, turning CO2 into rock within 12 months, eliminating it from the atmosphere safely, quickly and cost-effectively. Peridotite, which is found across America, Europe, Asia and Australasia, can mineralise more CO2 per tonne, faster, than any other rock, offering the potential for gigatons of CO2 to be eliminated.

## 5.15 Paleo

### Key information

Paleo develops new functional ingredients to improve plant-based meat and fish alternatives. Through precision fermentation, Paleo produces meat and fish proteins which are 100% bio-identical to animal proteins and 100% GMO-free. Precision fermentation is a proven, versatile and scalable technology that uses micro-organisms, such as yeasts, to produce selected target proteins. Most importantly, compared to conventional farming of animals, precision fermentation has a significantly lower environmental impact.

### 5.16 Hived

### Key information

Global e-commerce has become a mainstay of our economy, with 24% of retail purchases expected to take place online by 2026. However, this surge in demand has resulted in costly delivery services that rely on fossil fuels. With the transportation sector anticipated to remain one of the leading contributors to greenhouse gas emissions until 2050, the need for an alternative is clear. HIVED offers a novel approach to delivery services and logistics that prioritizes efficiency, cost reduction, and sustainability. By leveraging a smart logistics network, HIVED streamlines the movement of goods while mitigating congestion and reducing delivery times. This approach enables HIVED to drastically decrease emissions and support a circular economy, where the seamless, convenient, and cost-efficient movement of goods becomes the new standard.

## 5.17 Sunhero

### Key information

Sunhero offers high-quality photovoltaic (PV) installations, making autonomous energy accessible to millions of households, starting with Spain. The potential of PV technology for residential properties is not a new concept, but SunHero has reimagined the PV value chain to make it easy for residential customers to put solar panels on their roofs, reduce their carbon footprint and save on electricity bills. By removing barriers to a faster deployment of solar rooftop installations, Sunhero will accelerate the energy transition.

### 5.18 OPTIML

### Key information

The real estate industry is one of the most challenging markets to decarbonize, with buildings making up 40% of EU energy consumption and 36% of energy-related greenhouse gas emissions. OPTIML enables significant carbon reduction through smart investment recommendations. The software analyzes any number of portfolio assets across the most relevant ESG and regulatory data points – in minutes. This provides a tangible rating that real estate developers and asset managers can understand. At the same time, it continuously analyses changing regulatory and market data to always give end-users the most relevant recommendations.

# 5.21 Arsenale Bioyard

### Key information

Arsenale BioYards is the data and industrial backbone enabling companies to design and biomanufacture at scale, thus unlocking the transition to the bioeconomy.

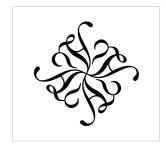

Arsenale BioYards aims at bringing down the cost of precision fermentation by an order of magnitude (e.g., production of proteins, lipids, chemicals... from micro-organisms). It does so by developing an end-to-end hardware and software platform.

(i) from lab scale to enable the design of organisms and experiments closer to industrial conditions, with a software predicting large scale performance from their small scale bioreactors

(ii) going up to scaling out biomanufacturing capacity with its standardized but modular BioYards.

It is an inherently long-term data- and economies-of-learning play, especially through the manufacturing data feedback loop linking back to the design. A European venture aiming to define and become the new standard for biomanufacturing and targeting a global footprint by 2035.

## 5.22 Biozeroc Ltd.

### Key information

We are here to help the construction industry build a carbon neutral future.

Biozeroc was founded in 2021 with a goal to decarbonise the construction industry. We appreciate the severity of the climate crisis, and are committed to provide cost competitive solutions at no extra cost to the planet.

Our vision is to provide access to carbon neutral construction materials, at scale, across the globe. We pride ourselves in offering technically robust, innovative and sustainable solutions. We believe that our cross-disciplinary approach is key to successful innovations, and are always welcoming innovative ideas while fostering long-term collaborations.

## 5.25 Podero

### Key information

Podero provides enterprise-grade software that allows utilities to control their customers' energy assets for energy trading and grid stabilization. Utilizing proprietary steering algorithms and API integrations with home energy assets, they offer both energy trading and Home Energy Management Systems (HEMS) to help utilities boost revenue while delivering savings to customers.

## 5.27 Mondra Global Limited

### Key information

Mondra specializes in enhancing food sustainability through an Al-driven environmental insights platform. Its primary focus is on automating product Life Cycle Assessments (LCA) to provide detailed environmental impact data across supply chains. This enables brand owners and suppliers in the food industry to monitor, improve, and communicate product environmental performance, facilitating collaborative efforts toward achieving Net Zero goals.
